Student Days is an annual student competition that is held by the Construction Institute (CI) of the American Society of Civil Engineers (ASCE). CI recruits top engineering students who have a passion for the construction industry, from across the country, to participate in the program.

CI creates a “real-world” scenario, which students will work together to solve. Student teams will develop a top-notch written proposal for a construction project. The program concludes with a final presentation in front of a panel of judges, who are industry professionals (who by the way are) looking for new talent – bonus!
“After working so closely with my team, I can call them my close friends and certainly will stay in touch for a very long time. I also got close to everyone else who attended Student Days and hope to see them soon in the future.”

Casey Wong
Cal Poly Pomona
2019 Participant

“Student Days provided a fast-pace and detailed exposure to engineering application within the construction industry. The networking opportunities presented to me while attending Student Days ultimately led to an internship and job offer with one of the sponsoring companies.”

Tyler Sloan
Saint Martin’s University
2018 Participant

“If you want to go into construction at all or project management, this is a huge opportunity to get those kinds of skills because you won’t find this type of intensity or rigor in your school courses.”

Aleya Abeshima
University of Washington
2018 Participant

“Student Days was such a wonderful experience all the way around. The mentors were incredibly helpful, while still making sure we figured out the problems for ourselves. They made us feel comfortable approaching them about anything. Also, the networking was so effective. There were numerous opportunities to talk with professionals, and I even had a job interview and was offered a position with one of the companies at the competition. The networking experience was certainly just as important as the competition itself. I hope many more students can experience this as well!”

Nalah Williams
University of Texas at Arlington
